

NimbusFlow Q3 Business Report

This quarter, NimbusFlow saw continued adoption growth across all pricing tiers. The chart below breaks down active pipeline counts per tier as of the end of Q3. Team tier remains the largest segment by active pipeline volume, reflecting strong mid-market adoption.

Enterprise tier, while smallest in raw pipeline count, contributes the highest average revenue per account due to custom pricing. Starter tier growth was flat quarter-over-quarter, attributed to the concurrent-run cap becoming a limiting factor for growing teams - several Starter accounts upgraded to Team mid-quarter as a result.
